This is a picture for snippet15.html / prototypes4.js.

In blue, we see what we care about most:
- we gave obj a property;
- we gave Class.prototype a property, so that obj can inherit it through the prototype chain.

In black, we see the rest of what was discussed in the snippet.

In grey, I include the rest of the picture. This just keeps track of the fact that Class and Object reference function objects.
